Communication Software

## CONTACT Communication Event & Data Logging Software

Simple  
Operation

Outstanding  
Reliability

Exceptional  
Performance

### Overview

**Turn your Phantom metal detector into a Critical Control Point and let CONTACT do the record-keeping you need!**

The revolutionary CONTACT Communication software provides a ground-breaking solution for event logging and data collection. Designed to communicate with Phantom metal detectors, this easy-to-install application is ideal for quality assurance record keeping and the collection of valuable information.

CONTACT software utilizes a powerful SQL back-end to generate flexible custom reports on-demand. Results can then be exported to convenient Excel or PDF formats instantaneously. The data output provides fully traceable QA intelligence – letting you know what and when something happened.

Compatible with Windows 2000 SP4 / XP / 2003 / Vista, CONTACT can be connected via three interface options: Serial RS-485 / Ethernet / Wireless Ethernet.

### Key Features

#### Data Capture

Detailed system activity information

#### Event Logging

Records of system status changes

#### Report Generation

Outputs QA reports on-demand

## CONTACT FEATURES & BENEFITS

<b>Long Term Data Storage</b>	Event and performance information can be held for years – data is easily accessible without the need for paper records
<b>Event Logging</b>	Time-stamped event recordings enable the detector to be easily integrated into existing HACCP procedures & systems
<b>On-Demand Reporting</b>	Manual reporting at any time by selectable production line and/or time period
<b>Report Exporting</b>	Reports can be quickly output to Excel or PDF files allowing for ease of information sharing and archiving
<b>QA Intelligence</b>	Provides records of testing and results for long term traceability
<b>Maintenance Support</b>	Captures configuration details to assist in routine maintenance and fault finding activities
<b>Phantom Compatible</b>	Compatible with all generations of Phantom metal detectors
<b>Live View</b>	Real-time visualization of reporting activity
<b>Universal Data Format</b>	Non-proprietary database platform enables flexible reporting solutions, compatible with other information systems
<b>SQL Server</b>	Industry standard database provides reliable server-based storage, enabling uninterrupted data collection
<b>SQL Installation Options</b>	SQL Compact: simple to install, not suited for multiple users SQL Standard: more robust, fast and suitable for multiple users

## SPECIFICATIONS

<b>Information Available</b>	Events, Test Results, Sensitivity, Calibration, Product ID, Reject ID, Complete list of Configuration parameters
<b>SQL Database Versions</b>	Compact - embedded in CONTACT for single-user applications Standard - requires SQL Server Express (or higher) installed
<b>Languages</b>	English, French, Spanish, Portuguese, German
<b>Interface options</b>	RS485 (up to 31 detectors - daisy chain to 1000 m) Ethernet – Wired or Wireless (unlimited number of detectors)
<b>System requirements</b>	Windows 2000 SP4 / XP / 2003 / Vista, Microsoft .NET 2.0 Framework
